

625

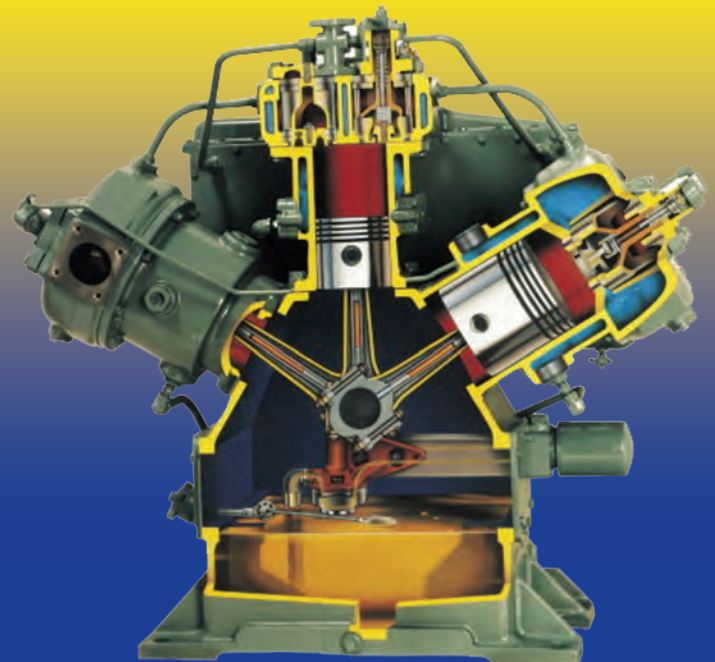

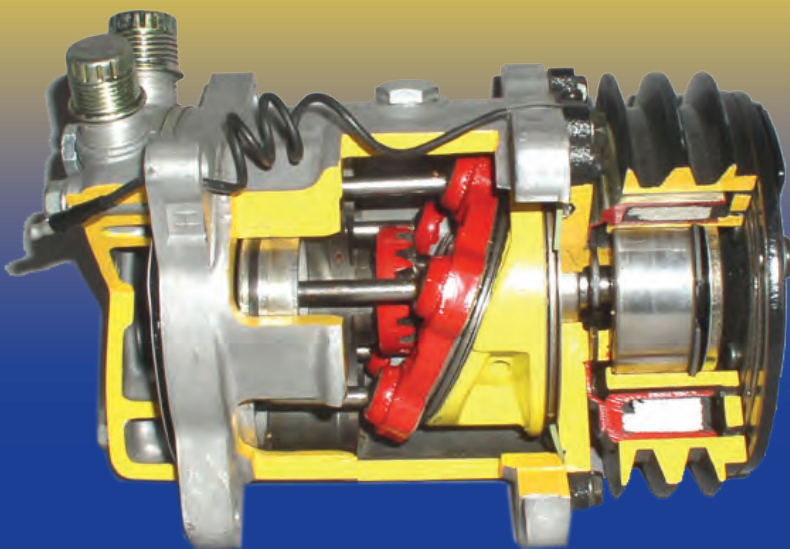

NEW GENERATION SYNTHETIC COMPRESSOR FLUID

Suitable for almost all compressor types.

Developed for long life in high temperature applications.

Reduces servicing costs and extends operating life of compressors.

625

Orion[®] 
LUBRICANTS

ADVANTAGES

ORION 625 is a new generation in compressor oil technology using highest quality synthetic oil and synthetic esters to give unsurpassed thermal stability for extended periods.

ORION 625 is non foaming and will not form hard inorganic deposits which cause wear and reduce heat transfer.

The ashless formulation of **ORION 625** reduces the servicing requirements of valves.

ORION 625 provides rapid and complete water separation as well as excellent corrosion protection.

High oxidation control, "stay in grade" properties reduce both oil carry over and consumption even when operating at high temperatures for extended periods.

Typical applications:

Most compressor types, including:

Rotary types - Screw compressors - Reciprocating
Cross head reciprocating - Vane types
