

757

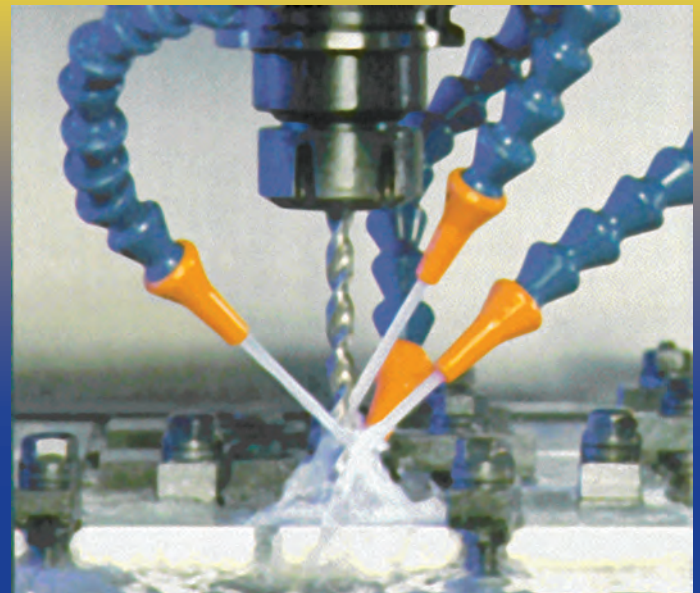

EMULSIFIABLE MACHINING & CUTTING FLUID

High lubricity and cooling properties help extend tool life.

Highly versatile, can be used on a wide range of metals and alloys.

Excellent corrosion protection for work pieces and machinery.

757

Orion[®] 
LUBRICANTS

ADVANTAGES

ORION 757 with its high lubricity helps prevent the metal bonding encountered in metalworking.

ORION 757 quickly absorbs the heat generated by the cutting friction promoting extended tool life.

The versatility of **ORION 757** makes it suitable for most types of machining applications on virtually all metals and alloys.

ORION 757 is a high quality emulsifiable cutting and machining coolant designed to give provide maximum performance on a wide range of metals and machining operations.

Typical applications:

All manual and re-circulating cutting/metalworking systems
