

Orion[®] 
LUBRICANTS

870

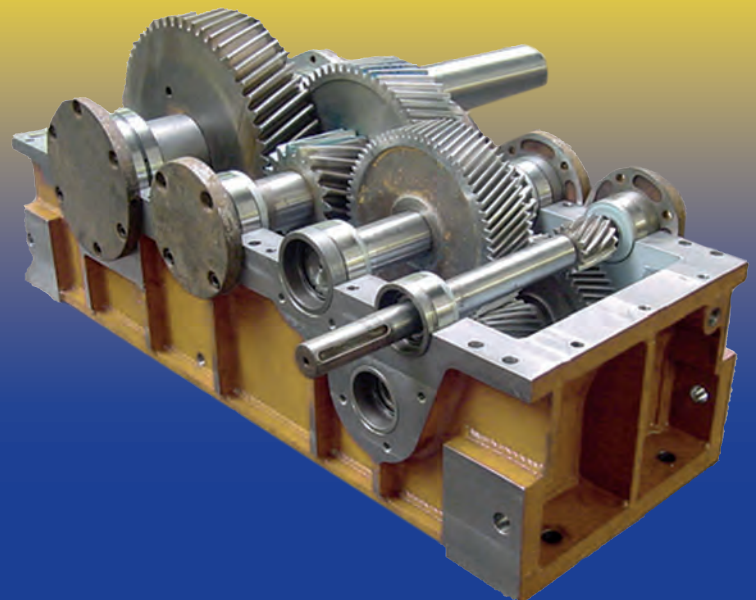

WATER RESISTANT VERSATILE GEAR LUBRICANT

Controls acid and frictional wear improving efficiency of the gear system.

High water resistance, lubricates and protects in presence of water.

Excellent friction and wear reduction dramatically extends service life of transmissions.

870

Orion[®] 
LUBRICANTS

ADVANTAGES

Orion 870 is non foaming, eliminating pressure build up against seals and reducing risk of leaks.

The high water resistance of **Orion 870** gives instant separation so water can be drained without needing to change the oil.

Special additives ensure **Orion 870** adheres to metal surfaces even under extreme pressures preventing premature wear and reducing friction. This feature can assist in noise and temperature reductions.

Orion 870 lasting lubricating film both protects metal surfaces against corrosion during long periods of idleness and provides instant lubrication at start up.

Orion's superior formulation will greatly extend the service life of equipment and at same time reduce the need to change oil as regular as previously.

Usually **Orion 870** will outlast service life of machinery.

Typical applications:

Recommended for use in transmissions where:
EP (extremem pressure), MP (multipurpose), HP (hypoid), LS (limited slip) or where demands for a gear oil to withstand high loads are encountered.

Not for use in automatic transmissions or engine crankcases
