Orion[®] 
LUBRICANTS

ADVANTAGES

ORION 92 has been developed for all types of open gears including spur, helical and bevel types subjected to high loads and water.

Special additives in **ORION 92** create a self repairing lubricating film for maximum protection.

ORION 92 leaves a thin almost dry film that will not collect dust or "pack" between the gear teeth.

ORION 92 is best applied with a spatula or stiff brush, can also be thinned with suitable solvent.

Typical applications:

Cement truck rollers - Bridge opening gears - Ski lifts
Mining and crusher equipment - Transport-Fifth wheel
Cabel cars - Crane swivel gears - Crane telescopes
