

Product reference Orion 95+

20.11.2012

Last season we used about 36 cartridges of grease and shifted two or three bearings on our embankment mowers. The bearings in the lawn mower are exposed to water and other natural elements that can wash away the grease if it is not of high quality. The bearings corrode and become damaged and can cause additional repair costs. This was a problem for us.

But this summer we tried Orion 95+ NLGI2. We noticed a definite improvement after we started using this grease. We have so far in this season spent only 3 cartridges compared to 36 cartridges last season. And we have not needed to replace any bearings.

We are very satisfied with Orion 95+. The grease will not wash away and Orion 95+ protects against corrosion. Orion 95+ retains its properties even under high loads where ordinary greases lose consistency and start to bleed. We can confidently recommend this grease.
